

The Carrot MX bracket wiring loom has been specially developed for the harsh conditions a motocross bike is exposed to. The wiring harness supplied from the factory is not suitable for this, which often causes electrical problems.

We have completely redesigned the bracket under the seat for better placement of the components and routing of the wires. This is resulting in a much neater package and is better protected against dust, mud and water.

The carrot MX wiring loom uses all original connectors, but modified so that they are completely sealed. In addition, high-quality materials are used that are resistant to oils, fuels and high temperatures.

The entire wiring harness is manufactured in such a way that it has optimal flexibility and no cable is under tension.

All this ensures a reliable wiring harness where electronic failures are a thing of the past.

- Custom seat bracket
- Plug and play MX wiring loom
- Fully sealed against dust, water, etc.
- Original connectors
- High quality materials

## Application

|   |
|---|
| Original connectors with custom adapters        |
| TE Spec55 conductor wire (Spec: M22759/32)      |
| Shielded crank sensor cable (Spec: M27500)      |
| Raychem DR25 heatshrink (Spec:AMS-DTL-23053/16) |
| Raychem System 25 molded boots                  |
| RT125 High performance epoxy                    |
| Full concentric twisted for optimal flexibility |
| Original connectors with custom adapters        |
| Full plug and play with the original components |

## Suitable brands MX bikes

|           |
|-----------|
| KTM       |
| Husqvarna |
| GasGas    |

## Ordering information
